

1 HUD Welcome - Goodbye Strategy – CGEA1.3

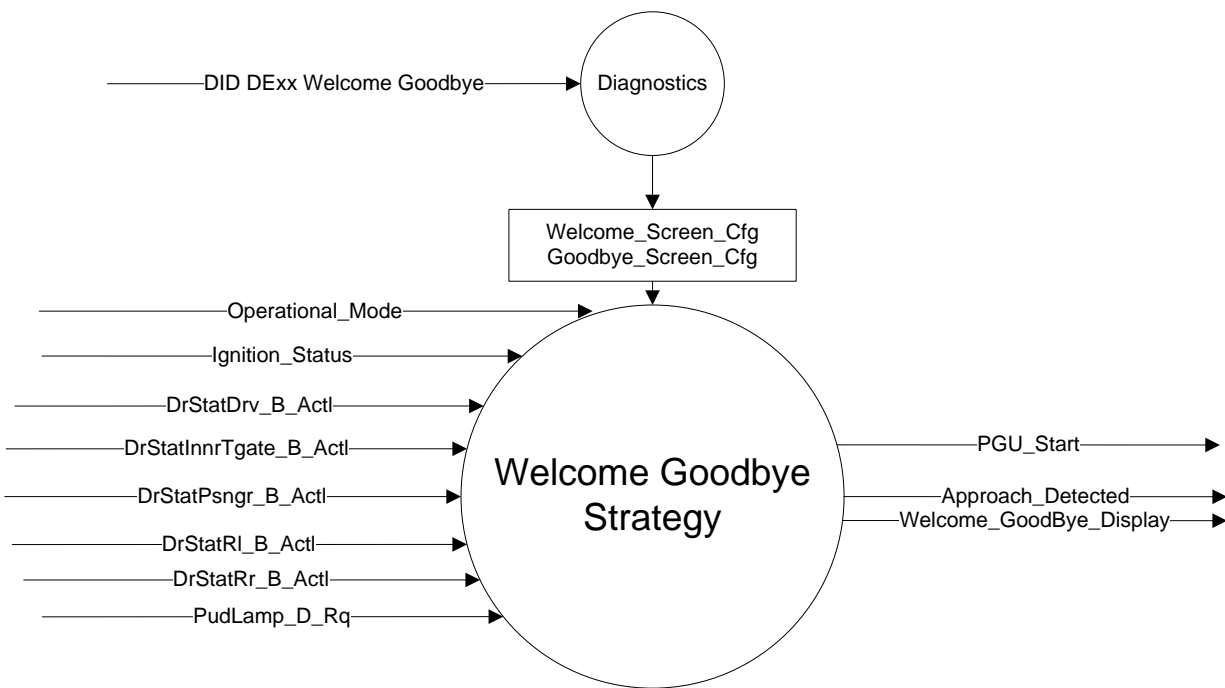

1.1 Functional Description

The HUD wakes up on detecting the approach of driver to the vehicle, and process the data required for displaying the welcome screen. At the same time, it reads the stored values of HUD image on/off status, Brightness, vertical position, rotation and keeps the HUD picture generation unit ready for display. Once any door is opened, HUD shall display the welcome screen (Only Blank screen for MY D544/U554).
