

# 1 HUD Image Adjustment Function – CGEA1.3

## 1.1 Functional Description

The HUD Image adjustment function deals with the following settings:

- HUD Vertical Position – Adjust the vertical position of the image
- HUD Horizontal Position – Adjust the Horizontal position of the image
- HUD Rotation – Adjust the tilt of the image by rotating the image
- HUD Vertical Size – Adjust the vertical size of the image between three options: small, medium and big

The available options for Image adjustment are based on the program. For example, HUD Vertical Size is currently available for Combiner HUD based vehicle programs. Horizontal Position and Rotational Position will be available for Advanced HUD. Refer to the program details for actual options that are available. The CAN signals will be available accordingly.

Options for CHUD Vertical Size (Tall, Mid, and Short):

The exact graphics will be part of HMI specification.

### 1.3.3.2 Audio

None

### 1.3.3.3 Switch Control Logic

Consumer access to the HUD Image Adjustment function shall be as specified in instrument cluster requirements.

### 1.3.4 PFM-REQ-300118/A-System Accuracy

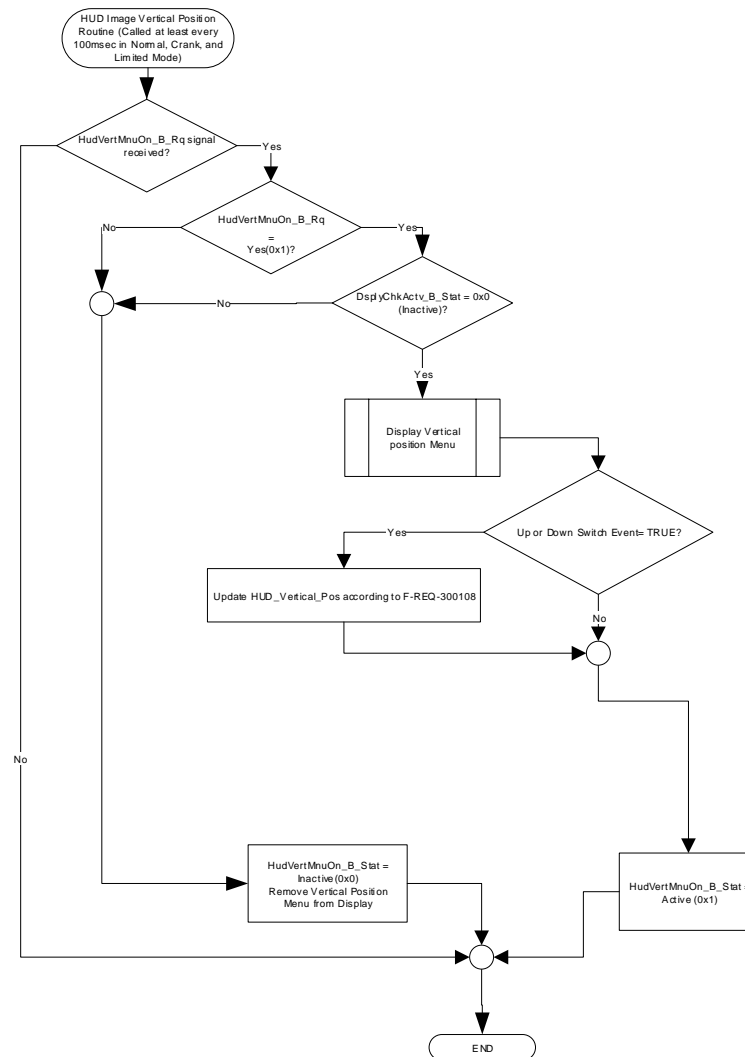

Within a 100msec of receiving a message that results in a change of state the HUD will update the display to the proper status.

### 1.3.5 Operation: Performance and Functional

The screen content to be displayed while configuring this size parameter is demo content and not the actual vehicle data. Please refer to the actual HMI Wallpapers for the program. The given images are sample pictures

### 1.3.5.2 Operation Description (supports algorithm flowchart/state diagram)

#### 1.3.5.2.1 F-REQ-300113/B-HMI Graphics

The HMI graphics shall show the image corresponding to HUD\_Vertical\_Pos, HUD\_Horizontal\_Pos and HUD\_Rotation\_Pos value for Vertical, Horizontal and Rotation menu. The core logic shall command the HUD Image to the position corresponding to HUD\_Vertical\_Pos, HUD\_Horizontal\_Pos and HUD\_Rotation\_Pos, and HUD\_Vertical\_Sz.

#### 1.3.5.2.2 F-REQ-300114/B-HUD Attributes

The attributes HUD\_On\_Off, HUD\_Density, HUD\_ADAS, HUD\_Vertical\_Pos, HUD\_Rotation\_Pos and HUD\_Vertical\_Sz are part of personalization memory and are stored and recalled by Store/Recall command from Memory Seat module

### 1.3.5.3 Function Safety Classification (EMC)

### 1.3.5.5 F-REQ-343336/A-Selection Timer

Timer Name	Duration	Description	Min	Max	Resolution
HUD_VERTICAL_SELECTION_TIMER	375 Msec (default)	Duration of the time the Up or Down switch is pressed & held before scrolling up or scrolling down the Vertical Adjustment	150 msec	5000 msec	25 msec
HUD_ROTATION_SELECTION_TIMER	200 Msec (default)	Duration of the time the Up or Down switch is pressed & held before rotating up or rotating down the Rotation Adjustment	150 msec	5000 msec	25 msec

The timer duration for HUD\_VERTICAL\_SELECTION\_TIMER & HUD\_ROTATION\_SELECTION\_TIMER is program specific and will be determined during development. Default values (375ms and 200ms) should be used until program values are determined.

## 1.4 Error Handling

### 1.4.1 Missing Message Strategy

The signals will be declared missing as per the Diagnostics section of this SPSS.

DTCs states and history will be determined as per the Diagnostics section of this SPSS.

## 1.5 Diagnostics

### 1.5.1 Self Test

None

### 1.5.2 Engineering Test Mode

### 1.5.3 Part II Performance
