Revision History

Date	Version		Notes
April 20, 2015	1.0	Initial Release	
-			
December 9, 2015	1.1	Updated Release	
		SR-REQ-140544/B-System	<joravec4></joravec4>
	Overview		Improve documentation. Move requirements into separate lines.
			No technical change.
		SR-REQ-199141/A-Bus	<pre><joravec4></joravec4></pre>
	Frequency IES-MMI2C-9	SR-REQ-199142/A-Slave	Split requirement into a separate line. Formerly in REQ-140544 <ioravec4></ioravec4>
	Addresses		Split diagnostic requirement into a separate line. Formerly in REQ-140544
		SR-REQ-199146/A-Clock	<pre><pre><pre></pre></pre><pre></pre><pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre></pre></pre>
	Stretching IFS-MMI2C-S	SR-REQ-140545/B-	Split diagnostic requirement into a separate line. Formerly in REQ-140544 <pre></pre>
	Supported D	isplays	Eliminate SDM12 (doesn't exist, yet)
	IFS-MMI2C-S Microcontroll	SR-REQ-140552/B-Display	<pre><joravec4> Moved requirement here from REQ-140544</joravec4></pre>
		SR-REQ-140551/B-Touch	< oravec4>
	and Calibrati	on	Clarify requirements for portrait orientation
	IFS-MMI2C-S	SR-REQ-202034/A-Signal	<pre><joravec4> Clarify responsibility to define threshold for diagnostic</joravec4></pre>
		SR-REQ-140554/B-Timer	<pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre><pre></pre></pre> <pre></pre>
	Settings	D DEC 1001171 T	Relax enable / disable to 200 ms for JDI
	Ready	SR-REQ-199145/A-Time to	<joravec4> Split diagnostic requirement into a separate line. Formerly in REQ-140544</joravec4>
		/A-Diagnostics	<pre></pre>
	IEC MMISC (SR-REQ-199349/A-Invalid	Remove REQ-199356. Not applicable for capacitive touch
	Atmel User D		<joravec4> Improve documentation, explain method to diagnose and actions to take.</joravec4>
		,	No technical change.
		SR-REQ-199350/A- Display (Gen2)	<joravec4> Improve documentation, explain method to diagnose and actions to take. No technical change.</joravec4>
	IFS-MMI2C-S Unexpected	SR-REQ-197882/A- Reset	<joravec4> Add diagnostic requirement to monitor INIT bit (REQ-140614) to detect power-cycle and crash/reset.</joravec4>
		SR-REQ-197881/A-Reset	<joravec4></joravec4>
	Request	SR-REQ-197883/A-LCD	Split diagnostic requirement into a separate line. Formerly in REQ-140614.
	Connection	3K-KLQ-197003/A-LOD	Split diagnostic requirement into a separate line. Formerly in REQ-140614.
		SR-REQ-197885/A-	<joravec4></joravec4>
	Temperature	Derating SR-REQ-197884/A-LCD	Split diagnostic requirement into a separate line. Formerly in REQ-140614.
	Backlight		Split diagnostic requirement into a separate line. Formerly in REQ-140614.
	IFS-MMI2C-S Module / Par	SR-REQ-197886/A-LCD	<joravec4> Split diagnostic requirement into a separate line. Formerly in REQ-140614.</joravec4>
		SR-REQ-199144/A-Failure to	split diagnostic requirement into a separate line. Formerly in REQ-140614.
	Enable (Gen	1)	Split diagnostic requirement into a separate line. Formerly in REQ-140544
	Lock (Gen2)	SR-REQ-197887/A-Loss of	<joravec4> Add diagnostic requirement to monitor LLOSS bit (REQ-140614) to detect momentary loss-of-lock.</joravec4>
		SR-REQ-199353/A-Loss of	<joravec4></joravec4>
	Communicati Microcontroll	ion with Display	Improve documentation, explain method to diagnose and actions to take. No technical change.
	IFS-MMI2C-S	ER-REQ-199355/A-Loss of ion with Touch IC	No technical change. <joravec4> Improve documentation, explain method to diagnose and actions to take.</joravec4>
	JEO 1 11 11 2 2 3	DD DEO 40005 (11 1) (11	No technical change.
	Power Test	SR-REQ-199354/A-AVdd	<joravec4> Improve documentation, explain method to diagnose and actions to take. No technical change.</joravec4>
		SR-REQ-199369/A-Pin Fault	<joravec4></joravec4>
	Test		Improve documentation, explain method to diagnose and actions to take. No technical change.

FILE: 12C OVER LVDS COMMUNICATION	FORD MOTOR COMPANY CONFIDENTIAL	Page 2 of 59
PROTOCOL V1.11 APR 28, 2021.DOCX	The information contained in this document is Proprietary to Ford Motor Company.	1 3.9 - 3. 33

IFS-MMI2C-SR-REQ-199370/A-Signal	<pre><joravec4></joravec4></pre>
Limit Test	Improve documentation, explain method to diagnose and actions to take. No technical change.
IFS-MMI2C-SR-REQ-197874/A-Interrupt Polling	<pre><joravec4> Add requirement for host to poll, in case of suspected missed / stuck interrupt.</joravec4></pre>
IFS-MMI2C-SR-REQ-199134/A-Restart AEQ Algorithm	<pre><joravec4> Improve documentation, explain requirements of LVDS chipset. No technical change.</joravec4></pre>
IFS-MMI2C-SR-REQ-199143/A-Display Re-Enable (Gen1)	<joravec4> Split requirement into a separate line. Formerly in REQ-140544</joravec4>
IFS-MMI2C-SR-REQ-199348/A-Atomic	<pre><joravec4></joravec4></pre>
Transaction	Improve documentation, explain requirements of LVDS chipset. No technical change.
IFS-MMI2C-SR-REQ-199357/A-Avoid driving INTB_IN during loss-of-lock	<pre><joravec4> Improve documentation, explain requirements of LVDS chipset. No technical change.</joravec4></pre>
IFS-MMI2C-FUN-REQ-140573/B- Generation 1 Display Modules	<pre><joravec4> Removed REQ-140594 Touch Controller (Atmel) Message. Superseded by REQ-140577</joravec4></pre>
IFS-MMI2C-SR-REQ-197942/A-Interrupt	<pre><joravec4> Improve documentation. No technical change.</joravec4></pre>
IFS-MMI2C-SR-REQ-197934/A-Loss of Lock	<pre><joravec4> Improve documentation. No technical change.</joravec4></pre>
IFS-MMI2C-SR-REQ-197944/A-Write to Display Microcontroller	<pre><joravec4> Improve documentation. No technical change.</joravec4></pre>
IFS-MMI2C-SR-REQ-197943/A-Read	<pre><ipre></ipre></pre> <pre></pre> <pre></pre>
from Display Microcontroller	Improve documentation. No technical change.
IFS-MMI2C-SR-REQ-197946/A-Read from Display Microcontroller Beyond Defined Length	<pre><joravec4> Improve documentation. No technical change.</joravec4></pre>
IFS-MMI2C-SR-REQ-140589/B-Display	<joravec4></joravec4>
Status Message - Legacy	Improve documentation. No technical change.
IFS-MMI2C-SR-REQ-140595/B-0x01 LCD Backlight PWM Value	<pre><joravec4> Improve documentation. No technical change.</joravec4></pre>
IFS-MMI2C-SR-REQ-140596/B-0x02 Display Scanning	<pre><joravec4> Improve documentation. No technical change.</joravec4></pre>
IFS-MMI2C-SR-REQ-140597/B-0x03	<joravec4></joravec4>
Display Enable	Improve documentation. No technical change.
IFS-MMI2C-SR-REQ-140600/B-0x04 Display Shutdown	<pre><joravec4> Improve documentation. No technical change.</joravec4></pre>
IFS-MMI2C-SR-REQ-197941/A-Interrupt Request	<pre><joravec4> Improve documentation, explain INTB_IN is edge-triggered.</joravec4></pre>
•	Change design so interrupt request is triggered by an event, instead of a level.
STR-307933/A-Single IC driving INTB_IN	<pre><joravec4> Improve documentation. No technical change.</joravec4></pre>
STR-307934/A-Multiple ICs driving	<pre><pre></pre></pre> <pre></pre>
INTB_IN	Improve documentation. No technical change.
STR-307941/A-Interrupt Request	<pre><joravec4></joravec4></pre>
Strategy	Improve documentation, explain requirements of LVDS chipset. No technical change.
IFS-MMI2C-SR-REQ-198936/A-Interrupt Service	<pre><joravec4> Improve documentation. No technical change.</joravec4></pre>
IFS-MMI2C-SR-REQ-197933/A-Loss of Lock	<pre><joravec4> Improve documentation. No technical change.</joravec4></pre>
IFS-MMI2C-SR-REQ-140564/B-Write to	<pre><joravec4></joravec4></pre>
Subaddress	Improve example. No technical change.
IFS-MMI2C-SR-REQ-140561/B-Read	<joravec4></joravec4>
from Subaddress	Improve example. Change requirement to echo subaddress.
	Remove requirement for repeated-start.
IFS-MMI2C-SR-REQ-197857/A-Write to Read-Only Subaddress	<pre><joravec4> Improve example.</joravec4></pre>
•	Remote requirement to NAK invalid bytes.
IFS-MMI2C-SR-REQ-140569/B-Write Underflow	<pre><joravec4> Improve example.</joravec4></pre>
	Remove requirement to NAK.

FILE: I2C OVER LVDS COMMUNICATION	
PROTOCOL V1 11 APR 28 2021 DOCY	

	Identification Table	Correct typo on Atmel 641T IC
	IFS-MMI2C-SR-REQ-140617/B-0x02	<joravec4></joravec4>
	LCD Backlight PWM Value IFS-MMI2C-SR-REQ-140618/B-0x03	Eliminate invalid bit.
	Display Scanning IFS-MMI2C-SR-REQ-140619/B-0x04	Improve documentation. No technical change.
	Display Enable	Improve documentation. No technical change.
	IFS-MMI2C-SR-REQ-140620/B-0x05 Display Shutdown	<pre><joravec4> Improve documentation. No technical change.</joravec4></pre>
	IFS-MMI2C-SR-REQ-140621/B-0x06 Button Backlight PWM Value	<pre><joravec4> Eliminate invalid bit.</joravec4></pre>
	IFS-MMI2C-SR-REQ-140622/B-0x07 Button Status	<joravec4> Improve documentation. No technical change.</joravec4>
	IFS-MMI2C-SR-REQ-140623/B-0x30	<joravec4></joravec4>
	Interrupt Status Register	Add touch interrupt. Change to edge-triggering behavior: clear on reading ISR, set on any event.
	IFS-MMI2C-SR-REQ-140624/B-0x31 Core Assembly FPN	<pre><joravec4> Improve documentation. If unsupported return 0xFF's, as required in REQ-140565.</joravec4></pre>

1 General Requirements

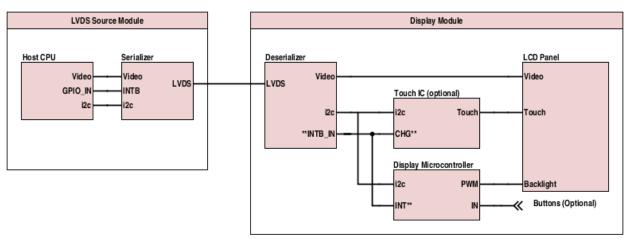

2 Functional Definition

2.1 IFS-MMI2C-FUN-REQ-140540/C-I2C Interface Displays

2.1.1 <u>IFS-MMI2C-SR-REQ-140544/D-System Overview Displays</u>

The LVDS interface block diagram looks like:

^{**} Interrupt architecture varies by display

The LVDS Source Module contains:

- Host CPU, which acts as an I²C bus master
- LVDS Serializer IC

The Display Module contains:

- LVDS Deserializer IC
- Display Microcontroller, which acts as an I²C slave
- LCD Panel
- Touch IC (optional), which acts as an I²C slave
- Buttons (optional)
- Rotary (optional)

2.1.2 IFS-MMI2C-SR-REQ-199141/B-Bus Frequency

The I²C Master shall support a bus frequency of 400 kHz. All peripherals on the I²C Slave shall support a bus frequency of 400 kHz.

The I²C Master may configure the deserializer for, and operate at, any bitrate that meets overall system performance requirements. Refer to the TI user's guide for details on configuring the deserializer bitrate with "SCL High Time" and "SCL Low Time".

Note: Even if both sides use 400 kHz, the LVDS link has a lower effective-bitrate (~163 kHz) because each byte is buffered and regenerated. Refer to TI AN-2173 for a table of achievable net bitrates.

2.1.3 IFS-MMI2C-SR-REQ-199142/G-Slave Addresses

The following I²C Slave addresses shall be used (7 bit format):

Device	Generation 2 / IPC / HUD / EDM Displays	Generation 2 Cameras
Serializer (92x series)	0x15	0x5D
Serializer (UH92x series)	0x0C	
Serializer (UH94x series)	0x0C	
Deserializer (92x series)	0x35	0x30
Deserializer (94x series)	0x34	
Deserializer (98x series)	0x38	
Touch Screen Controller (mXT641T)	0x4B	
Touch Screen Controller (mXT449T)	0x4B	
Touch Screen Controller (mXT1188S)	0x4A	
Touch Screen Controller (mxT1067TD)	0x4B	
Touch Screen Controller (CYAT8268x)	0x24	
Touch Screen Controller (CYAT827x)	0x24	
Touch Screen Controller (S7880)	0x20	
Touch Screen Controller (mXT2912T)	0x4B	
Touch Screen Controller (TD7800)	0x2C	
Touch Screen Controller (HX83192-A)	0x48	
Slave Microcontroller	0x71	0x5E

I²C Slave shall not respond on any other slave address. All unspecified addresses are reserved for future expansion.

2.1.4 IFS-MMI2C-SR-REQ-199146/C-Clock Stretching

The I²C Master shall support clock stretching as defined by the I²C specification.

The I²C Slave shall minimize the required clock stretch time, and shall not stretch the clock for longer than 500µs at a time during normal operation (ie DISP_ST and TSC_ST).

Longer clock stretch is allowed outside normal operation (ie initialization) but should not exceed 25ms.

2.1.5 IFS-MMI2C-SR-REQ-140571/B-Device Drivers

LVDS Source module shall consider the dynamically-detected display module type, and load the correct device drivers for:

- Video Output
- Touch Input
- Display Control (backlight, status, etc)

For displays containing Atmel chipset, the LVDS Source module shall implement a software device driver based on the atmel_mxt_ts driver published by Atmel at https://github.com/atmel-maxtouch/linux. The driver must support all features of Atmel maXTouch E, S, and T series chips. The driver must support loading touch calibration in *.xcfg or OBP_RAW format. LVDS Source module shall implement Atmel's mxt-app published at https://github.com/atmel-maxtouch/obp-utils

2.1.6 IFS-MMI2C-SR-REQ-140549/B-Device Driver

LVDS Source Module shall consider the dynamically-detected display module type, and load the correct device drivers for:

- Video Output
- Touch Input (as applicable)
- Button Input (as applicable)
- Rotary Input (as applicable)
- Display Control (backlight, status, etc)

2.1.7 IFS-MMI2C-SR-REQ-140552/B-Display Microcontroller

The display microcontroller shall support the power up / power down requirements of the TSC. The display microcontroller shall provide the proper power sequencing and reset line controls for the TSC to power up / power down properly. The display microcontroller shall use the timing requirements of the TSC to determine that the TSC is ready.

The display microcontroller shall be robust to abrupt power removal.

The display microcontroller shall not update any data accessible over the I²C interface while an I²C access is in progress. An I²C access is bounded by the START and STOP states as defined by the I²C specification.

2.1.8 Touch

2.1.8.1 IFS-MMI2C-SR-REQ-140560/A-Touch Screen Pixel Mapping

Display shall be calibrated such that touch coordinates and display pixels have a 1:1 mapping.

2.1.8.2 IFS-MMI2C-SR-REQ-140551/B-Touch and Calibration

For a landscape display, the system shall be designed such that LCD [0,0] and Touch [0,0] are both in the top-left corner when viewed by the driver. This means that:

- LCD displays the video signal as top-to-bottom and left-to-right
- Touch is calibrated such that [0,0] is in the top-left corner

For a portrait display, the system shall be designed such that LCD [0,0] is in the bottom-left corner and Touch [0,0] is in the top-left corner when viewed by the driver. This means that:

- LCD is rotated counter-clockwise (-90 degrees) from the landscape orientation
- Touch is calibrated such that [0,0] is in the top-left corner

In both cases the display shall be responsible to control the direction of video (using HRV / VRV), based on the final orientation when installed in a vehicle.

2.1.8.3 Atmel Touch Controllers

2.1.8.3.1 IFS-MMI2C-SR-REQ-140556/B-Touch Screen Calibration (Atmel E-Series)

The display supplier shall calibrate:

- T9 instance 0 enabled
- T27 pinch, stretch enabled

The LVDS Source Module shall utilize these touch objects for single-touch and multi-touch detection.

The display supplier may utilize any other features to provide robust touch-detection. The LVDS Source module shall be robust against unexpected touch object reports.

2.1.8.3.2 IFS-MMI2C-SR-REQ-140558/B-Touch Screen Calibration (Atmel T-Series)

The display supplier shall calibrate:

- T100 instance 0 enabled
- T27 pinch, stretch enabled

The LVDS Source Module shall utilize these touch objects for single-touch and multi-touch detection.

The display supplier may utilize any other features to provide robust touch-detection. The LVDS Source module shall be robust against unexpected touch object reports.

2.1.8.3.3 IFS-MMI2C-SR-REQ-202034/A-Signal Limit Threshold

The display supplier shall define thresholds for the T25 signal limit test.

2.1.8.4 Cypress Touch Controllers

2.1.9 Initialization and Autodetect

2.1.9.1 IFS-MMI2C-SR-REQ-140547/C-Identifying Connected Display

At each power-up, I²C Master shall dynamically identify what kind of display is connected with the following strategy:

The I²C Master must detect I²C bus errors and restart the sequence until a decision is made.

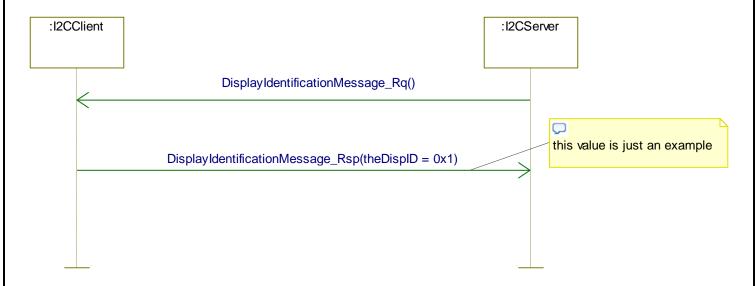

The I²C Master may support (S)DM/HUD/IPC hotplug. In this case, the I²C Master shall re-run the display identification sequence each time the LVDS cable is disconnected / connected. All dependent steps must be re-evaluated: which device driver to use, which calibration file to load (if applicable) and which HMI to display.

2.1.9.2 IFS-MMI2C-SR-REQ-140548/A-Identifying Connected Generation 2 Display

If the LVDS Source Module has been identified that a 2nd generation display is connected it has the possibility to request display ID for choosing e.g. correct calibration.

See requirement "Display Identification Table" for further information on display ID.

2.1.9.3 IFS-MMI2C-SR-REQ-140550/A-Touch Calibration

If applicable, the LVDS Source Module is responsible to write the correct touch calibration into the display module. LVDS Source Module shall use the following strategy:

LVDS Source Module shall examine the display, inspect the calibration written into the display, determine if a different calibration is available, and write the calibration if needed.

LVDS Source Module must use a technique that checks the entire touch calibration; computing a hash (CRC) is acceptable, but reading a version number or identifying-mark on the calibration is not acceptable.

LVDS Source Module must minimize flash-memory wear by rewriting the calibration only when required by the strategy.

2.1.10 IFS-MMI2C-SR-REQ-140554/C-Timer Settings

The timers described in this section shall have the following values:

Timer	Value
tDISP_EN(*1)	200ms
tDISP_DIS(*1)	200ms
t shtdwn	500ms
tLVDSSlave_RESET	1000ms

(*1) only valid in case of a display

- t_{DISP_EN(*1)}: Maximum time to enable LCD Panel, LCD Backlight, and display an image on the LCD.
- t_{DISP_DIS(*1)}: Maximum time to disable LCD Panel, LCD Backlight, and show a blank screen.
- tshtdwn: Maximum time to perform a controlled shutdown.

2.1.11 IFS-MMI2C-SR-REQ-199145/B-Time to Ready

All I²C Slaves (e.g. TouchScreenController and display microcontroller) shall be capable of communicating on the I²C bus 300ms after the filtered battery supply is enabled. Actual communication cannot begin until LOCK is achieved on the LVDS link between the LVDS Client and LVDS Source Module.

2.1.12 Diagnostics

This table summarizes the diagnostic requirements:

Requirement	DID	Byte	Bit	DTC	Name
REQ-199350	\$FD1A	2	1	B108E-4A	Unsupported Display
REQ-197882	\$FD1A	2	5	B108E-02	Unexpected Reset
REQ-197881	\$FD1A	1	3	B108E-02	Reset Request
REQ-197883	\$FD0A	1	7	B108E-01	Display Connection Error
REQ-197885	\$FD0A	1	5	B108E-4B	Thermistor Backlight De-rating
REQ-197884	\$FD1A	2	7	B108E-01	Backlight Circuit Fault
REQ-197886	\$FD0A	1	6	B108E-01	Touch Screen Error
REQ-199371	\$FD1A	2	0	U0162-00	LVDS Link Fault
REQ-197887	\$FD1A	2	6	B108E-02	Loss of Lock
REQ-199353	\$FD1A	1	4	B108E-87	Lost Comm. Display Microprocessor
REQ-199355	\$FD1A	1	1	B108E-87	Lost Communication Touch Controller
REQ-199354	\$FD1A	1	6	B108E-01	Touch Circuit Fault
REQ-199369	\$FD1A	1	5	B108E-01	Touch Panel Fault
REQ-199370	\$FD1A	1	0	B108E-01	Touch Panel Range/Performance
REQ-266614	\$FD1A	1	6	B108E-01	Touch Circuit Fault
REQ-266615	\$FD1A	1	5	B108E-01	Touch Panel Fault
REQ-266616	\$FD1A	1	0	B108E-01	Touch Panel Range/Performance

2.1.12.1 IFS-MMI2C-SR-REQ-199350/A-Unsupported Display (Gen2)

Applicable: Gen2

During initialization of a Gen2 display module, the LVDS Source Module reads the electronic identifier from display microcontroller subaddress 0x01.

If the LVDS Source Module does not support the type of display which is connected, it shall set DID \$FD1A byte 2 bit 1: Unsupported Display.

The LVDS Source Module shall set DTC B108E-4A based on this error.

FILE: 12C OVER LVDS COMMUNICATION	FORD MOTOR COMPANY CONFIDENTIAL	Page 17 of 59
PROTOCOL V1.11 APR 28, 2021.DOCX	The information contained in this document is Proprietary to Ford Motor Company.	. age e. ee

2.1.12.2 IFS-MMI2C-SR-REQ-197882/B-Unexpected Reset

Applicable: Gen2

The I²C Slave module bit INIT is cleared (=0) at power-on, and set (=1) at I²C Slave enable. Any transition from 1 -> 0 during normal operation indicates that I²C Master Module was operating normally but:

- 1. The I²C Slave was disconnected and same-or-different I²C Slave was connected.
- 2. Or the I²C Slave reset, for example: low-voltage, watchdog, etc.

After a Gen2 I²C Slave is initialized, I²C Master Module shall monitor INIT and set DID Unexpected Reset if an unexpected reset was detected.

The I²C Master Module shall implement a counter and set DTC Unexpected Reset if there are greater than 5 events detected during any single ignition cycle.

2.1.12.3 IFS-MMI2C-SR-REQ-197881/B-Reset Request

Applicable: Gen1, Gen2

The I²C Slave module is permitted to set RST_RQ to request a full power-cycle. Gen1 I²C Slave s are known to make this request after detecting loss-of-lock, low-voltage dropout, and backlight fault. The I2C Slave shall only make this request if the fault can be fixed by cycling power.

The I²C Master Module shall monitor bit RST_RQ and set DID Reset Request: I²C Slave Micro Reset if a reset was requested.

The I²C Master Module shall implement a counter and set DTC Reset Request if there are greater than 5 reset requests during any single ignition cycle.

2.1.12.4 IFS-MMI2C-SR-REQ-197883/A-LCD Connection

Applicable: Gen1, Gen2

The display module shall monitor the flexible cable connecting PCB to LCD panel, and report the status with bit DCERR.

The LVDS Source Module shall monitor bit DCERR and set DID \$FD0A bit 7: Display Connection Error.

The LVDS Source Module shall set DTC B108E-01 based on this error. The diagnostic has detected a faulty connection inside the display, and the recommended action is to replace the display.

2.1.12.5 IFS-MMI2C-SR-REQ-197885/A-Temperature Derating

Applicable: Gen1, Gen2

The display module shall monitor temperature, and report any over-temperature condition with bit TERR.

The LVDS Source Module shall monitor bit TERR and set DID \$FD0A bit 5: Thermistor Backlight De-rating.

The LVDS Source Module shall set DTC B108E-4B based on this error.

2.1.12.6 IFS-MMI2C-SR-REQ-197884/A-LCD Backlight

Applicable: Gen1, Gen2

The display module shall monitor the LCD backlight controller for any fault, and report the status with bit BLERR.

The LVDS Source Module shall monitor bit BLERR and set DID \$FD1A byte 2 bit 7: Backlight Circuit Fault.

The LVDS Source Module shall set DTC B108E-01 based on this error. The diagnostic has detected a failure inside the display, and the recommended action is to replace the display.

2.1.12.7 IFS-MMI2C-SR-REQ-197886/A-LCD Module / Panel

Applicable: Gen1. Gen2

If the display module is capable of monitoring the LCD panel for a fault, it shall report the status with bit LCDERR. Not all display modules are capable of this diagnostic.

The LVDS Source Module shall monitor bit LCDERR and set DID \$FD0A byte 1 bit 6: Touch Screen Error.

The LVDS Source Module shall set DTC B108E-01 based on this error. The diagnostic has detected a failure inside the display, and the recommended action is to replace the display.

2.1.12.8 IFS-MMI2C-SR-REQ-199371/C-LVDS Link Detect Fault

Applicable: Gen1, Gen2

When the LVDS Source Module is providing power to the LVDS Slave Module, it shall monitor LVDS chip register "LINK Status". If the LVDS Source Module detects an LVDS serial link fault it shall set DID "LVDS Link Fault"

The LVDS Source Module shall set DTC "LVDS Link Fault" based on this error. The diagnostic has detected a connection fault.

2.1.12.9 IFS-MMI2C-SR-REQ-197887/B-Loss of Lock (Gen2)

Applicable: Gen2

While enabled (DISP_EN=1), the display module shall monitor the deserializer LOCK pin for any loss-of-lock and latch the condition with bit LLOSS.

The LVDS Source Module shall monitor bit LLOSS and set DID \$FD1A byte 2 bit 6: Loss of Lock Fault if the deserializer reports a loss-of-lock event.

The LVDS Source Module shall implement a counter and set DTC B108E-02 if there are greater than 5 loss-of-lock events during any single ignition cycle. The diagnostic has detected a signal-quality problem with communication to the display module.

2.1.12.10 IFS-MMI2C-SR-REQ-199353/A-Loss of Communication with Display Microcontroller

Applicable: Gen1. Gen2

During normal operation, the LVDS Source Module display driver shall determine loss-of-communication by monitoring for persistent I²C NAK response.

If the LVDS Source Module detects a condition where the LVDS link is operational but the display microcontroller has a persistent NAK response (> 500ms), it shall set DID \$FD1A byte 1 bit 4: Lost Communication with Display Microprocessor.

The LVDS Source Module shall set DTC B108E-87 for this error. The diagnostic has detected a failure inside the display, and the recommended action is to replace the display.

2.1.12.11 IFS-MMI2C-SR-REQ-199355/A-Loss of Communication with Touch IC

Applicable: Gen1, Gen2

During normal operation, the LVDS Source Module display driver shall monitor for persistent I²C communication faults.

If the LVDS Source Module detects a condition where the LVDS link is operational but the touch IC has a persistent NAK response, it shall set DID \$FD1A byte 1 bit 1: Lost Communication with Touch Controller.

The LVDS Source Module shall set DTC B108E-87 for this error. The diagnostic has detected a failure inside the display, and the recommended action is to replace the display.

2.1.12.12 IFS-MMI2C-SR-REQ-199354/B-AVdd Power Test (Atmel-only)

Applicable: Gen1, Gen2

During Self-Test [0202] the LVDS Source Module shall command the Atmel Touch IC to run T25 AVdd Power Test. Based on the test result, the LVDS Source Module shall set DID \$FD1A byte 1 bit 6: Touch Circuit Fault.

The LVDS Source Module shall set DTC B108E-01 for any error. The diagnostic has detected a failure inside the display, and the recommended action is to replace the display.

2.1.12.13 IFS-MMI2C-SR-REQ-266614/A-AVdd Power Test (Cypress-only)

Applicable: Gen2

The LVDS Source Module shall monitor the Cypress touch IC error register.

Based on the AVDD error result, the LVDS Source Module shall set DID \$FD1A byte 1 bit 6: Touch Circuit Fault.

The LVDS Source Module shall set DTC B108E-01 for any error. The diagnostic has detected a failure inside the display, and the recommended action is to replace the display.

2.1.12.14 IFS-MMI2C-SR-REQ-199369/B-Pin Fault Test (Atmel-only)

Applicable: Gen1, Gen2

During Self-Test [0202] the LVDS Source Module shall command the Atmel Touch IC to run T25 Pin Fault Test. Based on the test result, the LVDS Source Module shall set DID \$FD1A byte 1 bit 5: Touch Panel Fault.

The LVDS Source Module shall set DTC B108E-01 for any error. The diagnostic has detected a failure inside the display, and the recommended action is to replace the display.

2.1.12.15 IFS-MMI2C-SR-REQ-266615/A-Pin Fault Test (Cypress-only)

Applicable: Gen2

During Self-Test [BIST] the LVDS Source Module shall command the Cypress Touch IC to run Built In Self Test. Based on the test result for SHORTS, the LVDS Source Module shall set DID \$FD1A byte 1 bit 5: Touch Panel Fault.

The LVDS Source Module shall set DTC B108E-01 for any error. The diagnostic has detected a failure inside the display, and the recommended action is to replace the display.

2.1.12.16 IFS-MMI2C-SR-REQ-199370/B-Signal Limit Test (Atmel-only)

Applicable: Gen1, Gen2

During Self-Test [0202] the LVDS Source Module shall configure appropriate signal levels then command the Atmel Touch IC to run T25 Signal Limit Test. Based on the test result, the LVDS Source Module shall set DID \$FD1A byte 1 bit 0: Touch Panel Range/Performance.

The LVDS Source Module shall set DTC B108E-01 for any error. The diagnostic has detected a failure inside the display, and the recommended action is to replace the display.

2.1.12.17 IFS-MMI2C-SR-REQ-266616/A-Signal Limit Test (Cypress-only)

Applicable: Gen2

During Self-Test [BIST] the LVDS Source Module shall command the Cypress Touch IC to run Built In Self Test. Based on the test result for Cp/Cm Tests, the LVDS Source Module shall set DID \$FD1A byte 1 bit 0: Touch Panel Range/Performance.

The LVDS Source Module shall set DTC B108E-01 for any error. The diagnostic has detected a failure inside the display, and the recommended action is to replace the display.

2.1.13 Failure Mode Avoidance

2.1.13.1 IFS-MMI2C-SR-REQ-202030/B-Reset Request

The LVDS Slave module is permitted to set RST_RQ to request a full power-cycle. The LVDS Slave shall only make this request if the fault can be fixed by cycling power (e.g. Gen1 displays are known to make this request after detecting loss-of-lock, low-voltage dropout, and backlight fault).

The LVDS Source Module shall monitor bit RST_RQ. If bit RST_RQ=1, the LVDS Source Module shall perform a controlled power shutdown. After t_{LVDSSlave_RESET} expires the LVDS Source Module shall re-enable power to the LVDS Slave and perform a normal re-initialization sequence.

2.1.13.2 IFS-MMI2C-SR-REQ-202033/B-Loss of Communication

During normal operation, if the LVDS Source Module detects a condition where the LVDS Slave has become non-functional, either Link Detect Fault or Loss of Communication, it shall perform a full power-cycle as an attempt to recover the LVDS Slave.

The full power-cycle sequence is: disable power, wait t_{LVDSSlave RESET}, then perform a full re-initialization sequence.

2.1.13.3 IFS-MMI2C-SR-REQ-197874/A-Interrupt Polling

The LVDS chipset does not mirror interrupt status; it only asserts INTB on a falling-edge of INTB_IN. Because the system is edge-sensitive, it is possible for the system to enter an error-state where INTB_IN is asserted but INTB is deasserted.

The LVDS Source Module shall use a timer and run the normal interrupt handling if an interrupt has not been seen for 100ms. This is intended to recover the system from a "stuck interrupt" condition.

2.1.13.4 IFS-MMI2C-SR-REQ-199134/B-Restart AEQ Algorithm

The LVDS chipset has an undocumented auto equalization (AEQ) behavior. When attempting to establish an LVDS link, the deserializer will begin with the minimum EQ setting and try to lock. If unsuccessful, it increments EQ and tries again. It repeats this routine until lock is established. Resetting the deserializer forces a restart at the beginning of the algorithm.

In any situation where deserializer is powered and running the search algorithm before the serializer is ready, the EQ setting could lock to a larger-than-necessary value.

Therefore, the LVDS Source Module shall reset the deserializer:

- After resetting the serializer
- After changing LFMODE

2.1.13.5 IFS-MMI2C-SR-REQ-199348/B-Atomic Transaction

The LVDS chipset as an undocumented requirement regarding the sequence of I²C messages across the LVDS link. Any transaction to the SER or DES must be performed in an "atomic" manner, because any I²C message that flows across the link will overwrite the register offset.

For example:

e.g. 0x4D

The following sequences are permissible:

- Write offset to 0x15, read 0x15, write offset to 0x4D, read 0x4D
- Write offset to 0x4D, write offset to 0x70, read 0x4D, read 0x70

The following sequences are not permissible and result in **incorrect transactions**:

- Write offset to 0x15, write offset to 0x4D, read 0x15, read 0x4D
- Write offset to 0x35, write offset to 0x4D, read 0x35, read 0x4D

Note: All addresses mentioned in this requirement are just examples to be more descriptive.

2.1.13.6 IFS-MMI2C-SR-REQ-199357/A-Avoid driving INTB IN during loss-of-lock

The LVDS chipset has an undocumented requirement regarding a falling-edge of INTB_IN during loss-of-lock. In this situation the interrupt may be missed, and the LVDS Source Module will not receive the signal.

The display module may use a "buffer-and-defer" strategy (STR-307941) to delay generating an interrupt request until lock is regained.

The system will recover when another interrupt arrives, or worst-case when LVDS Source Module performs interrupt polling (REQ-197874).

2.1.13.7 IFS-MMI2C-SR-REQ-226922/A-Write Configuration to Flash

Several versions of Atmel's Touch IC have an undocumented requirement to maintain power when saving a configuration to non-volatile memory with the BACKUPNV command.

If the LVDS Source Module removes power during a BACKUPNV operation, the configuration region of the flash memory may become unstable. The Atmel Touch IC will detect the condition, will not enter the firmware, and will remain stuck in the bootloader until actions are taken to clear the configuration region.

Because the LVDS Source Module cannot guarantee an uninterrupted BACKUPNV operation, the LVDS Source Module shall support in-field recovery using Atmel's recommended technique.

2.2 IFS-MMI2C-FUN-REQ-140607/D-Generation 2 Display Modules

2.2.1 <u>IFS-MMI2C-SR-REQ-140609/A-Display Module Identification</u>

The display module supplier shall program into the display microcontroller, at time of manufacturing, e.g. following information:

- Display ID
- Ford Part Number
- Electronic Serial Number
- Software Part Number (Firmware Version)

2.2.2 IFS-MMI2C-SR-REQ-140612/B-Touch Screen Controller Operation

The display module supports a touch interface on some versions. The touch screen controller shall use the standard I²C communication protocol defined by the touch screen controller vendor. The interrupt lines shall be serviced as defined by both the touchscreen controller documentation and the TI FPD Link III documentation for handling the back-channel interrupt signal.

2.2.3 IFS-MMI2C-SR-REQ-140613/B-Button Controller Operation

The display module supports a button array interface on some versions. The Display Module shall trigger an interrupt whenever a button press with button debounce or a button release with hysteresis occurs. The button press information shall be transmitted via the standard I²C communication protocol defined in this document.

2.2.4 IFS-MMI2C-SR-REQ-408696/A-Backlight Error

The display shall report any condition that prevents the backlight from turning on. While (DISP_EN=1) if any condition causes BL_ST=0 (even momentary recovery), the display shall

- Latch that a backlight error was detected (BLERR= 1)

2.2.5 IFS-MMI2C-SR-REQ-408694/A-Valid timing check

The display shall monitor valid video timing is received. For any instance, the video timing is incorrect while (DISP_EN=1), the display shall

- Automatically turn-off LCD backlight and panel to prevent showing bad video. This will not affect the commanded setting (DISP_EN), but must be reported in the actual status (DISP_ST =0).
- Latch that a DISPERR was detected (DISPERR = 1) indicating the display is not on.

2.2.6 IFS-MMI2C-SR-REQ-408695/A-Display Error

The display shall report any condition that prevents the display from enabling and shall report any condition that causes a dropped enable. While (DISP_EN=1) if any condition causes DISP_ST=0 (even momentary recovery), the display shall

- Latch that a display error was detected (DISPERR = 1)

2.2.7 Interrupt

In this design, multiple functions within the display are able to interrupt the LVDS Source Module. These include:

- 1. Any display status change / error event
- 2. CHG asserted by the Touch IC (for displays with touch)
- 3. Any button message (for displays with buttons)
- 4. Any rotary message (for displays with one or more rotary)

The display supplier may choose any hardware implementation that honors the interface requirements.

2.2.7.1 IFS-MMI2C-SR-REQ-197941/B-Interrupt Request

The LVDS chipset does not mirror interrupt status; it only asserts INTB on a falling-edge of INTB_IN. In this system, the interrupt request is an edge-triggered event.

The I²C Slave shall generate an interrupt request whenever an interrupt-generating event occurs. An interrupt-generating event is defined as any event that <u>could</u> cause a bit in subaddress 0x30 (ISR) to transition from 0 -> 1.

FILE: I2C OVER LVDS COMMUNICATION PROTOCOL V1.11 APR 28, 2021.DOCX

This diagram shows an example with the relationship of reading and clearing:

 Over temperature is an interrupt-generating event. The I²C Slave microcontroller sets corresponding bit in subaddress 0x30 (e.g. TERR, OVRTMP) here named as INT_ERR, then generates an interrupt request by driving INTB_IN (t=2).

Note: The I²C Slave will generate an interrupt request for this event; it doesn't matter if INT_ERR =1 already from a previous unserved interrupt.

- Read of I2C Slave microcontroller subaddress 0x30 (t=3) to understand cause of interrupt.
- Read of I²C Slave microcontroller subaddress 0x00 (t=5) clears INT_ERR (t=7).
 Note: The fault still exists.

2.2.7.2 Single IC driving INTB_IN

The display may implement a circuit where display microcontroller is the only IC that drives INTB_IN. This is recommended as the simplest implementation.

For displays with touch, the block-diagram would look like:

In this case, the display microcontroller monitors CHG and generates an interrupt request for any interrupt-generating event.

2.2.7.3 Multiple ICs driving INTB_IN

The display may implement a circuit where both display microcontroller and touch IC are able to drive the INTB_IN signal (as open-drain).

For displays with touch, the block-diagram would look like:

In this case, INTB_IN is driven by a different IC for each feature:

- Touch IC drives INTB_IN to generate an interrupt request for INT_TCH.
- Display microcontroller drives INTB IN to generate an interrupt request for INT BTN and INT ERR.

Display microcontroller reads INTB_IN to determine when the Touch IC is requesting an interrupt, so it can report an accurate INT_TCH value.

This circuit is vulnerable to a race-condition where two-or-more ICs attempt to generate an interrupt request at the same time. If multiple ICs drive INTB_IN an interrupt may be missed and the system may deadlock.

2.2.7.4 Interrupt Request Strategy

The display must implement a strategy to meet setup-time and hold-time requirements around an INTB_IN falling edge. This is applicable to both proposed hardware designs.

This diagram shows a strategy for the display microcontroller to "buffer-and-defer" the interrupt to meet timing constraints. The microcontroller monitors INTB_IN, verifies that INTB_IN is de-asserted for the required setup-time, drives INTB_IN for the required hold-time, then releases INTB_IN:

With two ICs driving INTB_IN (STR-307934), the display microcontroller may use this strategy to "buffer-and-defer" an interrupt request until after the touch IC releases INTB_IN.

2.2.7.5 IFS-MMI2C-SR-REQ-198936/B-Interrupt Service

When the LVDS Source Module receives the interrupt it shall:

- Read SER subaddress 0xC7 (ISR).
 Note: This action causes serializer to deassert INTB, preparing the system to assert INTB again on the next falling-edge of deserializer INTB IN.
- 2. Read display microcontroller subaddress 0x30 (ISR). Determine which sources have an interrupt pending.
- 3. Service each pending interrupt: touch, buttons, rotary, or status.

2.2.8 IFS-MMI2C-SR-REQ-197933/B-Loss of Lock Displays

The display shall monitor deserializer LOCK pin. For any loss-of-lock, the display shall:

- Automatically turn-off LCD backlight and panel to prevent showing bad video. This will not affect the commanded setting (DISP EN), but will be reported in the actual status (DISP ST =0).
- Latch that a loss-of-lock was detected (LLOSS = 1).
- If lock is regained, consider the commanded setting (DISP_EN) and determine if the LCD backlight and panel need to be automatically turned back on.

FILE: 12C OVER LVDS COMMUNICATION	FORD MOTOR COMPANY CONFIDENTIAL	Page 26 of 59
PROTOCOL V1.11 APR 28, 2021.DOCX	The information contained in this document is Proprietary to Ford Motor Company.	g = = 0

This strategy allows the system to recover quickly and automatically from a momentary loss-of-lock, without a full power-cycle. It also allows the LVDS Source Module to distinguish between signal-quality problems and a fault that requires full reset.

2.2.9 I2C Bus Interface

2.2.9.1 IFS-MMI2C-SR-REQ-140564/D-Write to Subaddress

This diagram shows a typical write by the I²C Master. Writes are implemented by writing the subaddress then one-or-more bytes of data:

2.2.9.2 IFS-MMI2C-SR-REQ-140561/D-Read from Subaddress

This diagram shows a typical read by the I²C Master. Reads are implemented by writing the subaddress, then reading an echo of the subaddress followed-by the data:

Same example showing functional safety support:

2.2.9.3 IFS-MMI2C-SR-REQ-403502/A-Repeated-Start Read from Subaddress

This diagram shows a typical read by the I²C Master using repeated start. Reads are implemented by writing the subaddress, then reading an echo of the subaddress followed-by the data:

2.2.9.4 IFS-MMI2C-SR-REQ-403503/A-Repeated-Start Write-Read from Subaddress

This diagram shows a typical write by the I²C Master using repeated-start. Writes are implemented by writing the subaddress then one-or-more bytes of data. Reads are implemented by writing the subaddress, then reading an echo of the subaddress followed-by the data:

2.2.9.5 IFS-MMI2C-SR-REQ-197857/C-Write to Read-Only Subaddress

If I²C Master Module attempts to write to a read-only subaddress, the I²C Slave shall send ACK to indicate the bytes are received but make no state-change.

As an example with subaddress ADDR that will be read-only. This diagram shows that the I²C Slave ignores an attempt to write to the subaddress:

White: LVDS Source Module / Lightblue: LVDS Slave Module

Same example showing functional safety support:

White: LVDS Source Module / Lightblue: LVDS Slave Module

2.2.9.6 IFS-MMI2C-SR-REQ-140569/D-Write Underflow

If the I²C Master writes too-few bytes, the I²C Slave shall make no state-change.

As an example with subaddress ADDR that will accept exactly two bytes of data. This diagram shows I²C Master attempting to write only one byte of data, and the I²C Slave making no state-change:

White: LVDS Source Module / Lightblue: LVDS Slave Module

Same example showing functional safety support:

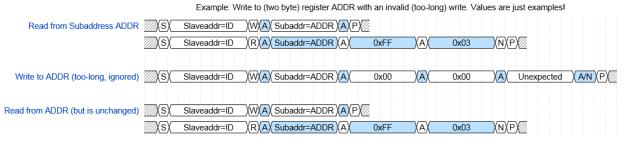

White: LVDS Source Module / Lightblue: LVDS Slave Module

2.2.9.7 IFS-MMI2C-SR-REQ-140570/D-Write Overflow

If the I²C Master attempts to write too-many bytes, the I²C Slave shall continue sending ACK to indicate the bytes are received, and make no state-change.

As an example with subaddress ADDR that will accept exactly two bytes of data. This diagram shows I²C Master attempting to write three bytes, and the I²C Slave making no state-change:

White: LVDS Source Module / Lightblue: LVDS Slave Module

Same example showing functional safety support:

White: LVDS Source Module / Lightblue: LVDS Slave Module

2.2.9.8 IFS-MMI2C-SR-REQ-140565/D-Undefined / Unsupported Subaddress

If the I²C Master attempts to write to an undefined subaddress, the I²C Slave shall:

- ACK to indicate the byte was received
- Update the internal subaddress register (for echo purposes)
- Take no other action because the request was unrecognized.

If I²C Master attempts to read from an undefined subaddress, the I²C Slave shall leave SDA undriven resulting in Data = 0xFF.

For example, subaddress 0x28 is undefined. This diagram shows the I²C Master attempting to write to, and read from, the undefined subaddress:

White: LVDS Source Module / Lightblue: LVDS Slave Module

Same example showing functional safety support:

	Example: Write or Read with Invalid Subaddress 0x28 including Rolling Counter (RC) and CRC. Values are just examplest																
Write to invalid 0x28 S	Slaveaddr=ID	(W)(A	4)(Subaddr=0x28 (invalid)	A	VALUE IGNORED ∬		(A)(RC			CRC8			4)(P)(
Read from invalid 0x28 S	Slaveaddr=ID	(W)(A	A)(Subaddr=0x28 (invalid)	(A	RC	(A		CRC8	F	X////						
//////(s)	Slaveaddr=ID	(R)(A	A)(Subaddr=0x28 (echo)	(A	RC N	X	CRC8	X N X		0xFF		(N)(P)(//	1//		
				White	e: LVDS	Source Module / Lightblue: LVDS S	lave M	odule									

2.2.9.9 IFS-MMI2C-SR-REQ-140611/C-Reserved Bits

I²C Slave shall respond with "reserved" bits equal to zero.

2.2.9.10 IFS-MMI2C-SR-REQ-140566/D-Reserved Bits

If I²C Master writes to a subaddress and any reserved bit is set, the I²C Slave shall treat the reserved bit as "don't care" and shall act upon the defined bits.

As an example with subaddress ADDR that has several undefined bits. This diagram shows the I²C Slave changing value from 0x00 to 0x03, and ignoring a reserved bit:

Example: Write ADDR with Undefined Bits set. Bit 0 and 1 defined only. Values are examples!

White: LVDS Source Module / Lightblue: LVDS Slave Module

Same example showing functional safety support:

Example: Write ADDR with Undefined Bits set. Bit 0 and 1 defined only. Values are examples!

White: LVDS Source Module / Lightblue: LVDS Slave Module

2.2.9.11 IFS-MMI2C-SR-REQ-399913/A-Functional Safety Support

If a function has e.g. an ASIL rating for functional safety, I²C bus communication shall implement "IFS-MMI2C-SR-REQ-399914-Rolling Counter behavior" and "IFS-MMI2C-SR-REQ-399916-CRC8" requirements.

2.2.9.12 IFS-MMI2C-SR-REQ-399914/A-Rolling Counter behavior

The rolling counter shall be incremented by one, in each consecutive corresponding frame. As well, if all values of this frame are the same.

If the rolling counter reaches its maximum value, it shall be reset and begin with default value, again.

Hint: See "IFS-MMI2C-SR-REQ-399915-Rolling Counter default value"

Example of a rolling counter supporting CRC:

Startup rolling counter is 0. So, first rolling counter carries 0. Next will have 1, and so on until 255. For next the rolling counter is reset to default value. So, it will be 0, again.

FILE: 12C OVER LVDS COMMUNICATION	FORD MOTOR COMPANY CONFIDENTIAL	Page 30 of 59
PROTOCOL v1.11 APR 28, 2021.DOCX	The information contained in this document is Proprietary to Ford Motor Company.	

Hint: This example assumes "IFS-MMI2C-SR-REQ-399915-Rolling Counter default value" defines default value to and size is eight bits.

2.2.9.13 IFS-MMI2C-SR-REQ-399915/A-Rolling Counter default value

default value for rolling counter is 0x0.

2.2.9.14 IFS-MMI2C-SR-REQ-399916/A-CRC8

For supporting CRC8, following requirements shall be implemented:

- "IFS-MMI2C-SR-REQ-399917-CRC8 algorithm",
- "IFS-MMI2C-SR-REQ-399918-CRC8 notation",
- "IFS-MMI2C-SR-REQ-399919-CRC8 initialization",
- "IFS-MMI2C-SR-REQ-399920-CRC8 computation",
- "IFS-MMI2C-SR-REQ-399921-CRC8 calculation",
- "IFS-MMI2C-SR-REQ-399922-CRC8 unused bits",
- "IFS-MMI2C-SR-REQ-399923-CRC8 unused bytes",
- "IFS-MMI2C-SR-REQ-399924-CRC8 data stream".

This means to add rolling counter field and CRC field to all defined messages directly behind.

2.2.9.15 IFS-MMI2C-SR-REQ-399919/A-CRC8 initialization

The CRC shall not return zero when the data set is all zero by initializing the CRC algorithm CRC to five (uint8 crc = 5; -- as shown in the above algorithm).

2.2.9.16 IFS-MMI2C-SR-REQ-399917/A-CRC8 algorithm

Following look up table is used for 0x83 CRC algorithm:

```
uint8 CalcCRC8(uint8 data[], uint8 len)
uint8 crc = 5; // CRC is non-zero CRC when all data is zero
uint8 tmp;
uint8 i = 0;
// CRC Lookup Table for \#0x83 = x^8 + x^2 + x + 1 (0x107) <=> (0xe0; 0x1c1)
static uint8 CRC_table 0x83[256] = { // so array is not allocated on stack}
0x00, 0x07, 0x0E, 0x09, 0x1C, 0x1B, 0x12, 0x15, 0x38, 0x3F, 0x36, 0x31, 0x24, 0x23, 0x2A, 0x2D,
0x70, 0x77, 0x7E, 0x79, 0x6C, 0x6B, 0x62, 0x65, 0x48, 0x4F, 0x46, 0x41, 0x54, 0x53, 0x5A, 0x5D,

// fetch CRC value from table
crc = CRC table 0x83[tmp];
i++;
return crc;
```

2.2.9.17 IFS-MMI2C-SR-REQ-399918/A-CRC8 notation

CRC algorithm shall use $x^8 + x^2 + x + 1$ (0x83 in "Koopman" notation) to calculate the 8-bit CRC of the data byte set. It has Hamming Distance of four (HD=4) for 119 data bits.

2.2.9.18 IFS-MMI2C-SR-REQ-399920/A-CRC8 computation

The CRC shall be computed whenever:

- Any of the data is updated
- OR whenever the message is transmitted. This option has less CPU load

2.2.9.19 IFS-MMI2C-SR-REQ-399921/A-CRC8 calculation

CRC calculation shall use all bytes before CRC byte (includes rolling counter, as well!).

2.2.9.20 IFS-MMI2C-SR-REQ-399922/A-CRC8 unused bits

Unused bits in the message frame shall be set to 0.

2.2.9.21 IFS-MMI2C-SR-REQ-399923/A-CRC8 unused bytes

Bytes with no signal/data (0x0) shall be used in CRC calculation. I.e. All 7 bytes are used in all CRC calculations.

2.2.9.22 IFS-MMI2C-SR-REQ-399924/A-CRC8 data stream

If CRC is not supported whole CRC8 shall be set to 0x00.

Hint: have a look in "BUTTON-SR-REQ-366706-Rolling Counter default value if CRC not supported".

[2]	-	-	-		-	-	-	-

- TCERR: Touch Connection Error (latched) (optional status)

This bit reports latched status of the flexible printed circuit connecting PCB to Touch Panel.

- 0 FPC is connected
- 1 FPC is disconnected
- TSCERR: Touch Screen Controller Error (latched) (optional status)

This bit reports latched status of touch panel controller

- 0 No Fault
- 1 Fault
- LLOSS: Loss of Lock (latched)

This bit reports latched status of loss-of-lock, as indicated by the deserializer LOCK pin.

FILE: 12C OVER LVDS COMMUNICATION	FORD MOTOR COMPANY CONFIDENTIAL	Page 33 of 59
PROTOCOL V1.11 APR 28, 2021.DOCX	The information contained in this document is Proprietary to Ford Motor Company.	1 11.92 20 01 00

- 0 Lock is established
- 1 Lock is lost
- RST RQ: Reset Request

This bit defaults clear, and is set when the I²C Client requires a full power-cycle reset to resolve some problem.

- 0 Normal operation
- 1 Request is requested
- DCERR: Disconnect error (latched)

This bit reports latched status of the flexible printed circuit connecting PCB to LCD Panel.

- 0 FPC is connected
- 1 FPC is disconnected
- TERR: Temperature Derating (latched)

This bit reports latched status of temperature derating mode.

- 0 Inactive
- 1 Active
- BLERR: LCD Backlight Error (latched)

This bit reports latched status of LCD backlight.

- 0 No Fault1 Fault
- LCDERR: LCD Error (latched)

This bit reports latched status of LCD Panel.

- 0 No Fault
- INIT: Display Initialized

This bit defaults clear, and is set after the I²C Client has been enabled.

- 0 I²C Client has not been enabled during this power-cycle.
- 1 I²C Client has been enabled at least once during this power-cycle.

This bit is used by the host to detect an unexpected reset. Any transition from 1 -> 0 during normal operation indicates that the I²C Client may need a complete re-initialization.

- TSC ST: Touch Controller Status

This bit reflects actual status. This may be different, due to delay or an error condition, from commanded value (TSC_EN).

- O Touch Screen Controller is not ready (held in reset).
- 1 Touch Screen Controller is ready for use.

If I2C Client has no touch screen controller, report 0.

DISP_ST: I²C Client Status (formerly Display Status)

This bit reflects actual status. This may be different, due to delay or an error condition, from commanded value (DISP_EN).

- 0 I²C Client is disabled.
- 1 I²C Client is enabled.
- HIGHERR: High Priority Error Status (latched)

This bit reports latched status if at least one of the high priority error(s) active. In some cases (dependent on definition of connected I²C Client), there exists an extra subaddress to read out more details, if I²C Source Module needs these.

- 0 No high priority error.
- High priority error active.
- MEDERR: Medium Priority Error Status (latched)

This bit reports latched status if at least one of the medium priority error(s) active. In some cases (dependent on definition of connected I²C Client), there exists an extra subaddress to read out more details, if I²C Source Module needs these.

- 0 No high priority error.
- 1 High priority error active.

- LOWERR: Low Priority Error Status (latched)
 - This bit reports latched status if at least one of the low priority error(s) active. In some cases (dependent on definition of connected I²C Client), there exists an extra subaddress to read out more details, if I²C Source Module needs these.
 - 0 No high priority error.
 - 1 High priority error active.
- BL_ST: Backlight Status

This bit reflects actual status. This may be different, due to delay or an error condition from commanded value.

- 0 Backlight is OFF (Backlight LEDs are off).
- 1 Backlight is ON (Backlight LEDs are on).
- DISPERR: Display Error (latched)

This bit reports latched status of Display Error.

- 0 No Fault.
- 1 Fault active.

Several bits in this I²C message have latched behavior, allowing the I²C Client to inform the host of a momentary event. The I²C Client microcontroller shall latch any value change until this subaddress is read by the host, then re-evaluate the current state.

For example, DCERR is a latched bit. This diagram shows latching behavior after a momentary FPC disconnect:

In this example:

- I²C Client detects a momentary FPC disconnect (t=1) and latches DCERR=1.
- I²C Client generates an interrupt request (t=2), and LVDS Source Module reads the latched value (t=5)
- I²C Client re-evaluates, determines FPC is now connected, and latches DCERR=0.
- I²C Client generates another interrupt request (t=6), and I²C Master reads the latched value (t=9)

2.2.10.2 IFS-MMI2C-SR-REQ-140615/C-0x01 Display Identification

The Display Identification message provides a mechanism to identify which kind of display is connected.

Subaddress: 0x01 Access: Read-Only Default Value: n/a

- Display ID: ID of connected I²CSlave according to "IFS-MMI2C-SR-REQ-140616-Display Identification Table".
- Subrevision: giving a more detailed information about evolution of connected I²CSlave module.
 I²C Slaves shall increase per 0x01 the subrevision on every hardware change, display micro firmware change or any compatibility break that not drives a major (means Display ID) change.

companions, cream man not an root at major (mount 2 ropins) 127 cmanger							
FILE: I2C OVER LVDS COMMUNICATION	FORD MOTOR COMPANY CONFIDENTIAL	Page 35 of 59					
PROTOCOL v1.11 APR 28, 2021.DOCX	The information contained in this document is Proprietary to Ford Motor Company.	. age ee ee					

I²C Masters should not require the use of the subrevision. Each Display ID begins with a subrevision of 0x00.

2.2.10.3 <u>IFS-MMI2C-SR-REQ-140616/K-Display Identification Table</u>

This table shows which display identifier shall be used by Generation 2 display:

Note: Each display (ex. SDM6) may have multiple variants, each with a different display identifier. This is because the variants have physical differences that require e.g. a different touch calibration file.

FILE: 12C OVER LVDS COMMUNICATION	FORD MOTOR COMPANY CONFIDENTIAL	Page 37 of 59
PROTOCOL V1.11 APR 28, 2021.DOCX	The information contained in this document is Proprietary to Ford Motor Company.	, age 21 3. 35

Note*: Display IDs 0xFD and 0xFE do not need to be implemented by suppliers. However, shall not cause any problems.

Note 1: For illumination strategy:

- in case of "PWM" use requirement for 0x02 LCD Backlight PWM Value (see "IFS-MMI2C-SR-REQ-140617)"
- in case of "ENC" use requirement "0x16 Encoded Backlight brightness Value" (see "IFS-MMI2C-SR-REQ-312337).
- in case of "RAW" use requirement "0x91 Light Ambient Sensor RAW Value" (see "IFS-MMI2C-SR-REQ-323568). Please keep in mind, this a proprietary, <u>not supported</u> and private interface and not recommended to use!

2.2.10.4 IFS-MMI2C-SR-REQ-140617/B-0x02 LCD Backlight PWM Value

The LCD Backlight PWM message contains the brightness information for a 10 bit display backlight PWM generator. The PWM generator should use the complete range and resolution of 1024 steps with 0x000 = off and 0x3FF = 100% on.

Subaddress: 0x02 Access: Read-Write

Default Value: {0x00, 0x00}

	7	6	5	4	3	2	1	0
[0]				BL_PV	VM[7:0]			
[1]	-	-	-	-	-	-	BL_PV	VM[9:8]

The SDM shall set a **default value** of 0x00 to the PWM message until set by the LVDS Source Module. Display illumination shall be turned on/off with display enable/disable (DISP_EN).

Reference Illumination Specification for how to use.

2.2.10.5 IFS-MMI2C-SR-REQ-140618/B-0x03 Display Scanning

The Display Scanning message provides a mechanism to control the LCD scanning direction.

Subaddress: 0x03 Access: Read-Write Default Value: 0x00

- VSD: Vertical Scanning Direction.
 - 0 Top to Bottom
 - 1 Bottom to Top (engineering test-use only)
- HSD: Horizontal Scanning Direction
 - 0 Left to Right
 - 1 Right to Left (engineering test-use only)

Display shall adjust the VRV / HRV pins on the LCD panel according to the value in this subaddress.

Display supplier shall ensure that video is oriented correctly, with default value 0x00, when the display is installed in the vehicle. LVDS Source Module is not responsible to set this subaddress based on the orientation of the LCD Panel. The capability is provided only for engineering test.

2.2.10.6 IFS-MMI2C-SR-REQ-140619/C-0x04 Display Enable

The Display Enable message provides a mechanism for the I²C Master to tell the I²C Slave to enable the display output.

Subaddress: 0x04 Access: Read-Write Default Value: 0x00

FILE: 12C OVER LVDS COMMUNICATION	FORD MOTOR COMPANY CONFIDENTIAL	Page 38 of 59
PROTOCOL V1.11 APR 28, 2021.DOCX	The information contained in this document is Proprietary to Ford Motor Company.	. aga aa a a

Ford	1	Ford Motor Con	npany	Subsystem Part Specific Specification Engineering Specification					
	7	6	5	4	3	2	1	0	
[0]	-	-	-	-	-	-	TSC_EN	DISP_EN	

- TSC EN: Touch Screen Controller Enable
 - 0 Command touch screen controller disabled
 - 1 Command touch screen controller enabled
- DISP EN: Display Enable.

Note: This controls both the LCD Panel and the LCD Backlight.

- 0 Command display disabled
- 1 Command display enabled

This subaddress sets and reports the commanded status. The actual status (TSC_ST / DISP_ST) may be different, due to delay or an error condition.

The I²C Master shall not attempt to enable unless it is driving a valid pixel clock and video signal.

If the I²C Slave detects a loss of LOCK while enabled, the I²C Slave shall take any action necessary to prevent visible video problems. This may include disabling the backlight. If LOCK is re-established the I²C Slave shall take any steps necessary to resume showing video. This may include reset of the LCD panel and re-enabling the backlight.

If the Enable Display Output bit is set to enabled during a controlled shutdown the I²C Slave shall ignore this bit and complete the shutdown.

2.2.10.7 IFS-MMI2C-SR-REQ-140620/C-0x05 Display Shutdown

The Display Shutdown message provides a mechanism for the I²C Master to tell the I²C Slave that it will remove power from the I²C Slave and it should perform a controlled shutdown.

Subaddress: 0x05 Access: Read-Write Default Value: 0x00

	7	6	5	4	3	2	1	0
[0]	-	-	-	-	-	-	-	SHDWN

- SHDWN: Display Shutdown
 - 0 Normal operation.
 - 1 Command display module to perform controlled shutdown.

After sending a controlled shutdown request, the I²C Master shall not remove power or stop driving video signal (including pixel clock) before t_{SHTDWN} expires. After the timer expires, the I²C Master shall remove power.

During an uncontrolled shutdown (i.e. battery removal, etc.) tshtdwn does not apply.

To enable function again, the I²C Master must perform the normal power initialization sequence.

2.2.10.8 IFS-MMI2C-SR-REQ-140621/B-0x06 Button Backlight PWM Value

The Display Button Backlight PWM message contains the brightness information for an 8-bit display backlight PWM generator. The PWM generator should use the complete range and resolution of 256 steps with 0x00 = 0 off and 0xFF = 100% on.

Subaddress: 0x06 Access: Read-Write Default Value: 0x00

- BL_PWM: Button Backlight PWM Value of the 8-bit PWM generator where 0x00 = fully off and 0xFF = fully on.

The SDM shall set a **default value** of 0x00 to the PWM message until set by the LVDS Source Module. Button illumination shall be independent from the display enable/disable (DISP_EN). Reference Illumination Specification for how to use.

2.2.10.9 IFS-MMI2C-SR-REQ-140622/B-0x07 Button Status

The Button Status message provides a mechanism to transmit button state status's back to the LVDS Source Module.

Subaddress: 0x07 Access: Read-Only

Default: n/a

PROTOCOL V1.11 APR 28, 2021.DOCX	The information contained in this document is Proprietary to Ford Motor Company.	1 ago 10 01 00

* Reference Input Translation Matrix for ButtonID values. Reference "LVDS Button SPSS" for how to use Button ID messages and Button Coding messages.

The SDM shall report the state of each button as defined above. There shall be either a default value of '0' if button is not pressed, or a single bit with a value of '1' for the proper button state.

If multiple buttons are pressed at the same time, the SDM shall report the appropriate states for each button (concurrent button presses are allowed).

Button debounce time shall be set to tbutton_pressed before the state is allowed to change.

State changes (not pressed to pressed & pressed to not pressed) shall be held for a minimum of t button_pressed before the state is allowed to change again (hysteresis).

Hint: tbutton_pressed is define in requirement "BUTTONv3-TMR-REQ-133003-T_reaction_time (I2C)" in Button SPSS.

2.2.10.10 IFS-MMI2C-SR-REQ-324135/A-0x08 Rotary Status

The Rotary Status message provides a mechanism to transmit rotary turning information and status back to the I²C Master. The Display Identification table indicates which display modules support this feature.

Subaddress: 0x08 Access: Read-Only

Default: n/a

	7	6	5	4	3	2	1	0

2.2.10.11 IFS-MMI2C-SR-REQ-395418/A-Exponential Backlight Brightness Values

Encoded backlight brightness concept shall be supported using exponential values.

2.2.10.12 IFS-MMI2C-SR-REQ-395419/A-Brightness Timer Function

To ensure various transition timings, brightness timer shall be implemented/supported according to "IFS-MMI2C-SR-REQ-312696-Backlight Timer Table".

2.2.10.13 IFS-MMI2C-SR-REQ-312336/A-0x15 Module specific backlight capabilities

The Module specific backlight capabilities message provides a mechanism to transmit various specific parameter values back to the I²C Master.

Subaddress: 0x15 Access: Read-Only

Default: n/a

	7	6	5	4	3	2	1	0				
[0]				BR_M	IN [7:0]							
[1]	BR_EXP	BR_LIN	BR_TIM	-	-	-	-	-				
[2]	BR_MAX [7:0]											
[3]	BR_MAX [15:8]											
[4]	BR_AREA [7:0]											
[5]				BR AREA [15:8]								

- BR MIN: Brightness minimum

Minimum value of brightness the module is capable.

in 0.1 cd/m² (nit)

(Hint: is first "on" value of e-curve (see *low value* in "IFS-MMI2C-SR-REQ-312701-Encoded Backlight Lookup Table") <u>example:</u> return value of 100 means 10.0 cd/m²

BR_MAX: Brightness maximum

Maximum value of brightness the module is capable.

in 1 cd/m² (nit)

example: return value of 1200 means 1200 cd/m²

- BR TIM: Brightness timer available

shows if I²C Slave supports brightness timer for smooth transition.

0 not supported

1 supported

if supported, all values of Backlight Timer Table must be implemented (see "IFS-MMI2C-SR-REQ-312696-Backlight Timer Table" (Backlight Timer Table))

BR AREA: Brightness area

size of lighted area.

in 1 cm² (=0.0001 m²)

example: return value of 184 means 184 cm² (=0.0184 m²)

- BR_LIN: brightness linear supported

Shows	if linear	brightness	is	supported.

Ford)

0 not supported supported

Note: at least one of BR_LIN or BR_EXP must be set!

BR_EXP: brightness exponential supported Shows if exponential brightness is supported.

not supported supported

Note: at least one of BR_LIN or BR_EXP must to be set!

Note: for further definition of these values see display spec

Reference Illumination Specification for how to use.

2.2.10.14 IFS-MMI2C-SR-REQ-312337/A-0x16 Encoded Backlight brightness Value

Note: Only applicable for I²C Slaves using "ENC" illumination strategy!

The Encoded Backlight brightness message contains an 11-bit value for supporting points for a logarithmic lookup-table ("ecurve") and a timer value for local smooth transition (if supported)

Subaddress: 0x16 Access: Read-Write

Default Value: {0x00, 0x00, 0x00}

	7	6	5	4	3	2	1	0
[0]				BL_E	NC[7:0]			
[1]		E	BL_TIM_UP[5:0]		E	BL_ENC[10:8	8]
[2]	BL_LIN_EXP			BL_T	IM_DN[5:0]			

BL TIM DN: Backlight Timer down

Time for I²C Slave to dim to stated value when downwards see lookup table for backlight timer "IFS-MMI2C-SR-REQ-312696-Backlight Timer Table".

BL_TIM_UP: Backlight Timer up

Time for I²C Slave to dim to stated value when upwards see lookup table for backlight timer "IFS-MMI2C-SR-REQ-312696-Backlight Timer Table".

BL_ENC: Backlight Encoded value (known as N in formula) Showing supporting point (entry point for "e-curve" lookup table; see Encoded Backlight Lookup Table in Requirement "IFS-MMI2C-SR-REQ-312701-Encoded Backlight Lookup Table")

BL LIN EXP: encoded linear or exponential

Showing if encoded value has to be interpreted in linear or exponential way.

linear encoding 0

1 exponential encoding

The I²C Slave shall set a **default value** of 0x00 to the encoded value and timer message until set by the I²C Master. Means: reading this message returns last set values.

Display illumination shall be turned on/off with display enable/disable (DISP_EN).

Reference Illumination Specification for how to use.

2.2.10.15 IFS-MMI2C-SR-REQ-312701/A-Encoded Backlight Lookup Table

"e-curve" lookup table shall be calculated using following formula:

0 = 0.0000

Ν

1 = low value (-> first non-off value, =BR_MIN)

 $N = low \ value * (high \ value / low \ value) ^ ((N-1)/2046)$

 $2047 = high \ value \qquad (-> 100\%)$

low value = minimum brightness value returned by I2C Slave

(see BR_MIN in "IFS-MMI2C-SR-REQ-312336-0x15 Module specific backlight capabilities")

high value = maximum brightness value returned by I2C Slave

(see "IFS-MMI2C-SR-REQ-312336-0x15 Module specific backlight capabilities")

= supporting point with value range 2<= N <= 2047

Note: In case I²C Slave supports only lower backlight resolution, internal reduction is allowed (-> further definition see display spec)

2.2.10.16 IFS-MMI2C-SR-REQ-312696/A-Backlight Timer Table

The Backlight Timer Table shows a lookup table that must be implemented with all values, if I²C Slave supports local smooth transition (see "IFS-MMI2C-SR-REQ-312336-0x15 Module specific backlight capabilities")

To ensure smooth processing please refer to "IFS-MMI2C-SR-REQ-395417-Smooth Dimming Transition Time Steps".

For steps please use following formula: $steps = round^1$ (time / internal interrupt time) ¹use 4/5 rounding

Setting	Time [s]	comment
0	0,000	minimum - one interrupt step
1	0,250	
2	0,500	
3	0,750	
4	1,000	
5	1,250	
6	1,500

For time values, round to closest possible time step.

2.2.10.17 IFS-MMI2C-SR-REQ-395417/A-Smooth Dimming Transition Time Steps

To ensure smooth processing/transition the internal time steps shall be <= 20ms.

2.2.10.18 IFS-MMI2C-SR-REQ-140623/C-0x30 Interrupt Status Register

The Interrupt Status message provides a mechanism to check the reason of pulling the interrupt line. For that the LVDS Source Module requests this message to transmit the interrupt reason back to the LVDS Source Module.

Subaddress: 0x30 Access: Read-Only

Default: n/a

_	7	6	5	4	3	2	1	0
[0]	ı	ı	-	-	INT_ROT	INT_TCH	INT_BTN	INT_ERR

- INT_TCH: Touch Interrupt Mirrors Atmel CHG signal.
 - 1 CHG is asserted
 - 0 CHG is deasserted

Returns =0 if the display does not support touch.

- INT BTN: Button Interrupt
 - Set on button event: press, release, or repeated transmission.
 - Cleared on reading subaddress 0x07.

Returns =0 if the display does not support buttons.

- INT ERR: Display Status Interrupt
 - Set on display status change; any bit in subaddress 0x00 changing 0->1 or 1->0.

Cleared on reading subaddress 0x00.

- INT ROT: Rotary Interrupt
 - Set on Rotary event; any change in bit in subaddress 0x08 changing 0->1 or 1->0 or change in DETENTS for any Rotary Knob.

Cleared on reading subaddress 0x08.

Returns =0 if the display does not support any rotary.

The display shall generate an interrupt request whenever an interrupt-generating event occurs. An interrupt-generating event is defined as any event that causes a bit in this register to transition from 0 -> 1.

Note: The LVDS chipset does not mirror interrupt status; it only asserts INTB on a falling-edge of INTB_IN. This system uses an edge-triggered interrupt request. Refer to REQ-197941 for requirements about driving INTB_IN to make an interrupt request.

2.2.10.19 IFS-MMI2C-SR-REQ-140624/C-0x31 Core Assembly FPN

The I²C Slave Core Assembly message provides a mechanism to transmit a Ford Part Number back to the I²C Master.

Subaddress: 0x31 Access: Read-Only

Default: n/a

FILE: 12C OVER LVDS COMMUNICATION	FORD MOTOR COMPANY CONFIDENTIAL	Page 47 of 59
PROTOCOL V1.11 APR 28, 2021.DOCX	The information contained in this document is Proprietary to Ford Motor Company.	1 1.91 1. 0.00

Ford		Ford Motor Com	pany				Subsystem Par En	t Specific Spec gineering Spec	ification ification
	7	6	5	4	3	2	1	0	
[0]				Core Assemb	ly character[()]			
[24]				Core Assembl	y character[2	4]			

 Core Assembly: Released (or prototype) Ford Part Number Null-terminated string. For example "H1BT-14F180-FA".
 Maximum length 24 characters plus NULL.

The I²C Master shall read a maximum of 25 bytes, be robust to receiving non-ASCII bytes, and be robust to receiving non-NULL terminated data.

If the I2C Slave is not released with this kind of Ford Part Number, the I^2C Slave shall indicate that the subaddress is unsupported as described in REQ-140565. In this case the I^2C Slave would leave SDA undriven resulting in Data = 0xFF.

2.2.10.20 IFS-MMI2C-SR-REQ-140625/C-0x32 Delivery Assembly FPN

The Delivery Assembly message provides a mechanism to transmit a Ford Part Number back to the I²C Master.

Subaddress: 0x32 Access: Read-Only

Default: n/a

	7	6	5	4	3	2	1	0
[0]	Delivery Assembly FPN character[0]							
[
[24]			Delive	ry Assembly	FPN charac	ter[24]		

 Delivery Assembly FPN: Released (or prototype) Ford Part Number Null-terminated string. . For example "H1BT-18B955-FA" Maximum length 24 characters plus NULL.

The I²C Master shall read a maximum of 25 bytes, be robust to receiving non-ASCII bytes, and be robust to receiving non-NULL terminated data.

If the I²C Slave is not released with this kind of Ford Part Number, the I²C Slave shall indicate that the subaddress is unsupported as described in REQ-140565. In this case the I²C Slave would leave SDA undriven resulting in Data = 0xFF.

2.2.10.21 IFS-MMI2C-SR-REQ-140626/C-0x33 Software FPN

The Software Part Number message provides a mechanism to transmit a Ford Part Number back to the I²C Master.

Subaddress: 0x33 Access: Read-Only

Default: n/a

_	7	6	5	4	3	2	1	0
[0]	Software FPN character[0]							
[24]			S	Software FPN	V character[24	4]		

 Software FPN: Released (or prototype) Ford Part Number Null-terminated string. For example "H1BT-14D358-FA" Maximum length 24 characters plus NULL.

The I²C Master shall read a maximum of 25 bytes, be robust to receiving non-ASCII bytes, and be robust to receiving non-NULL terminated data.

If the I2C Slave is not released with this kind of Ford Part Number, the I2C Slave shall indicate that the subaddress is unsupported as described in REQ-140565. In this case the I²C Slave would leave SDA undriven resulting in Data = 0xFF.

2.2.10.22 IFS-MMI2C-SR-REQ-140627/D-0x34 Serial Number

The Serial Number message provides a mechanism to transmit an electronic serial number back to the I²C Master.

Subaddress: 0x34 Access: Read-Only Default Value: n/a

	7	6	5	4	3	2	1	0
[0]	Serial Number character[0]							
[24]			S	erial Numbe	r character[24	4]		

Serial Number:

Null-terminated string.

Maximum length 24 characters plus NULL.

Note: This specification contains no functional requirement about the format of the serial number.

The I²C Master shall read a maximum of 25 bytes, be robust to receiving non-ASCII bytes, and be robust to receiving non-NULL terminated data.

If the I²C Slave contains no serial number, the I²C Slave shall indicate that the subaddress is unsupported as described in REQ-140565. In this case the I²C Slave would leave SDA undriven resulting in Data = 0xFF.

2.2.10.23 IFS-MMI2C-SR-REQ-140628/C-0x35 Main Calibration Data FPN

The Main Calibration Data message provides a mechanism to transmit a Ford Part Number back to the I²C Master.

Subaddress: 0x35 Access: Read-Only Default Value: n/a

	7	6	5	4	3	2	1	0
[0]	Main Calibration Data FPN character[0]							
					•			
[24]			Main Ca	alibration Dat	a FPN chara	cter[24]		

Main Calibration Data FPN: Released (or prototype) Ford Part Number Null-terminated string. No example provided. Maximum length 24 characters plus NULL.

The I²C Master shall read a maximum of 25 bytes, be robust to receiving non-ASCII bytes, and be robust to receiving non-NULL terminated data.

If the I2C Slave is not released with this kind of Ford Part Number, the I2C Slave shall indicate that the subaddress is unsupported as described in REQ-140565. In this case the I²C Slave would leave SDA undriven resulting in Data = 0xFF.

2.2.10.24 IFS-MMI2C-SR-REQ-307237/A-0x40 Image Adjustment

The Image Adjustment message provides a mechanism for the I²C Master to tell I²C Slave where to move the image and increase/decrease brightness of the image (e.g. related to user settings).

Subaddress: 0x40 Access: Read-Write

Default Value: 0xFFFFFFF

	7	6	5	4	3	2	1	0	
[0]				Horizonta	al Position				
[1]		Vertical Position							
[2]		Rotation							
[3]				Brigh	tness				

Horizontal Position: coordinate in steps of horizontal position of the image

0x00-0xFD: valid range 0xFE: invalid

0xFF: no change (of horizontal position)

Vertical Position: coordinate in steps of vertical position of the image

0x00-0xFD: valid range 0xFE: invalid

0xFF: no change (of vertical position)

Rotation: number of steps to rotate image

0x00-0xFD: valid range 0xFE: invalid

0xFF: no change (of rotation)

Brightness: number of steps to adjust brightness

0x00-0xFD: valid range 0xFE: invalid

0xFF: no brightness change

2.2.10.25 IFS-MMI2C-SR-REQ-306750/A-0x41 Supplier Precalc Low Warping Table

The Supplier Precalculated Low Warping Table message provides a mechanism to get a data for distortion adjustment of the image from I²C Slave.

2.2.10.31 IFS-MMI2C-SR-REQ-323568/A-0x91 Light Ambient Sensor RAW Value

Note: Only applicable for I²C Slaves using "RAW" illumination strategy!

The RAW values light sensor message contains an 8-Bit raw value and 4 values showing a status.

Since this is not a recommended strategy to have the illumination strategy isolated and proprietary in receiving ECU, this is not fully supported or described.

Subaddress: 0x91 Access: Read-Write

Default Value: { 0x00, 0x0 }

	7	6	5	4	3	2	1	0
[0]				BL_R	AW[7:0]			
[1]	-	-	-	-	-	-	BL2_RAV	V[1:0]

Note: It is highly recommended NOT to use this message!

- BL_RAW: RAW value of sensor value
- BL2 RAW: status of sensor

0x0 Null

0x1 Low

0x2 High

0x3 Faulty

2.2.10.32 IFS-MMI2C-SR-REQ-324467/A-0x92 Forward Collision Warning Status

The Forward Collision Warning Status message provides a mechanism to transmit if a Forward Collision Warning event occurs to the I²C Slave.

Subaddress: 0x92 Access: Read-Write

Default: n/a

FCW_Flag: Forward Collision Waning Flag

This bit defaults clear, and is set if a Forward Collision warning event occurs.

Off FCW visible warning event is not active Conference on FCW visible warning event is active

2.2.10.33 IFS-MMI2C-SR-REQ-378557/A-0xA0 Client specific High Priority Errors

The Client specific High Priority Errors message provides a mechanism to read out errors of this category in more details, if needed.

Subaddress: 0xA0

Several bits in this I²C message have latched behavior, allowing the I²C Client to inform the host of a momentary event. The I²C Client microcontroller shall latch any value change until this subaddress is read by the host, then re-evaluate the current state.

In case these are not read by the host they will be reset after shutdown, too. This means, they don't need to be stored to be available after shutdown cycle.

If a new error is evaluated, related bit in this message shall be set AND related bit of related category (here: Bit 3 for High Priority Error) in subaddress 0x00 Display Status (see: IFS-MMI2C-SR-REQ-140614-0x00 Display Status) shall be set, as well.

2.2.10.34 IFS-MMI2C-SR-REQ-378558/A-0xA1 Client specific Medium Priority Errors

The Client specific Medium Priority Errors message provides a mechanism to read out errors of this category in more details, if needed.

Subaddress: 0xA1 Access: Read-Only Default Value: n/a

Several bits in this I²C message have latched behavior, allowing the I²C Client to inform the host of a momentary event. The I²C Client microcontroller shall latch any value change until this subaddress is read by the host, then re-evaluate the current state.

In case these are not read by the host they will be reset after shutdown, too. This means, they don't need to be stored to be available after shutdown cycle.

If a new error is evaluated, related bit in this message shall be set AND related bit of related category (here: Bit 5 for Low Priority Error) in subaddress 0x00 Display Status (see: IFS-MMI2C-SR-REQ-140614-0x00 Display Status) shall be set, as

2.2.10.36 IFS-MMI2C-SR-REQ-408697/A-0xA3 Client Specific Diagnostic Message

The Client specific diagnostic message provides an interface for vendor defined diagnostics. This message is module specific. The format of the message shall be defined in the module's product specification. The content may be used for triage, analytics and verification of diagnostic mechanisms.

Subaddress: 0xA3 Access: Read-Write Default Value: n/a

DIAGNOSTIC MESSAGE: Client specific diagnostic message.

2.2.10.37 IFS-MMI2C-SR-REQ-140629/B-I2C Reserved Subaddresses

The read and write messages at subaddress 0xB0-0xFF shall be reserved for internal supplier uses.

3 Appendix A: Definitions / Acronyms

ADM – Auxiliary Display Module
DES – LVDS Deserializer
DM – Display Module
DMD – Digital Micro-Mirror Device
DTC – Diagnostic Trouble Code
EDM – External Display Module
ESN – Electronic Serial Number
FPC – Flexible Printed Circuit
FPN – Ford Part Number
Gen2 Cameras – e.g. Digital Rear View Camera
HUD – Head Up Display
IPC – Instrument Panel Cluster
IPMB – Image Processing Module B, Rear View Camera
ISR – Interrupt Status Register
SDM – Slim Display Module
SER – LVDS Serializer
TFT – Thin Film Transistor
TSC – Touch Screen Controller
